BOS Pragma
Strategy to execution — and we stay

Microsoft

Create a competitive edge with AI.

Put agents to work your way.

Most SMBs tried AI. Few have agents at work

Organizations have moved beyond AI experimentation, but many still struggle to turn early chatbot pilots into capabilities the business can rely on. Fragmented tools, stalled pilots, and agents lacking business context all point to the same challenge: no single platform meets organizations where they are.

What SMB leaders need to know

- Agents are only as useful as the context behind them
- Governance built into the platform is what enables scale
- The right starting point is the one that fits you today

40%

of the nearly 3,000 SMBs IDC surveyed do not have a single full-time IT employee in-house.[1]

Start where you are, not where a vendor says

There's no single right way to start. Install a ready-to-use agent from Microsoft Marketplace or describe what you need in plain language and let Copilot Studio build it—no development team required.

More than 230,000 organizations already build agents this way, choosing from over 4,000 ready-to-deploy agents built by trusted partners. Whichever path you take, agents understand how your business works from day one, using the context across your work, data, and processes without a separate integration project.

KEY TO SUCCESS

Your starting point is not a dead end

What you build early plugs directly into Microsoft Foundry as the business matures, carrying its data,

Build exactly what your business needs

When packaged solutions stop being enough, Microsoft Foundry and GitHub take you further—without a large engineering organization.

Foundry gives you more than 11,000 models, a managed runtime, and no infrastructure to stand up yourself. Compare, mix, and switch models based on cost, performance, or safety.

Developers move faster the whole way through, with AI assistance built into a platform 180 million developers already trust. Developers using GitHub Copilot completed a task 55% faster than those who did not, and protection shifts earlier, automatically resolving 53% of production vulnerabilities inside the development lifecycle.

KEY TO SUCCESS

Never locked into one model

Mix models per use case and let the Model Router send each request to the best one for quality, cost, or latency. Costs fall as simple work routes to cheaper models, and nothing needs rewriting when better models arrive.

Scale with intelligence and security

Growing from one agent to fifty raises the real questions. Can we see every agent? Do they have the right access? Can they leak sensitive data?

Microsoft IQs give every agent shared business context—how work happens, how the business is modeled, and what your organization knows. Accuracy compounds as you add agents, using 80% fewer tokens and delivering 36% better answers than traditional retrieval.

Agent 365 governs every agent from one place, showing who deployed it, what data and tools it can reach, how it behaves, and what it costs. Identity, protection, and compliance are built in from the start, and agents only ever see what each person is already authorized to see.

KEY TO SUCCESS

Every agent starts smarter

Growth here does not mean more complexity. Your fifth agent, or your fiftieth, starts smarter and more secure than your first, because it is not starting alone.

Why BOS Balance Of Storage Systems AG and Microsoft?

Put your first agent to work with confidence

We help you find the first workflow worth automating, then build the business case, deploy, and drive adoption. The result is an agent doing real work, on a foundation that grows with

your business.

We guide teams through adopting Microsoft solutions like Copilot Studio, Microsoft Marketplace, Microsoft Foundry, and GitHub alongside the systems they already run—so agents connect to real business data without a custom integration project, and governance is in place before you scale.

One continuous platform brings together everything needed to turn AI interest into business results: flexible ways to start, the tools to build exactly what you need, shared business context that makes every agent smarter, and governance and security built in from the first agent.

- ✓ Ready-to-use agents
- ✓ Shared business context
- ✓ Low-code agent building
- ✓ Built-in security

BOS Balance Of Storage Systems AG **is ready to help you succeed.**
